Erratum

In Figure 1 on page 144 of volume 51 of *Wildfowl*, in the paper entitled "Breeding status and aggressive communication in the Harlequin Duck *Histrionicus histrionicus*" by John Lazarus *et al.*, the sample size of 72 should have read 73.

We would like to apologise for this error.

Wildfowl is the scientific journal of the Wildfowl & Wetlands Trust and is available on subscription only. Please call +44 (0)1453 891900 for further information.

Wildfowl 52

WWT believes that conservation must be based on a solid foundation of scientific knowledge. To this end, the papers presented in *Wildfowl 52* cover a number of conservation areas many of which are approached using a range of different scientific disciplines. We have continued the tradition of publishing results from a number of long-term studies that have formed a growing thread between different issues of *Wildfowl*, but whose common theme is to underpin the conservation and management of waterbirds and the wetland habitats on which they depend. I hope that you find this year's range of papers interesting, helpful and informative.

My thanks go to all the authors who prepared and submitted material for *Wildfowl 52*, as well as to the many referees who kindly gave their valuable time and knowledge. Thanks also to WWT staff who helped with various stages in the production of the journal. These include Peter Cranswick, David Chamberlain, Maggie Sage, Jenny Earle, Colette Hall and Paul Marshall.

Lastly I owe a great debt of gratitude to the hard work, perseverance and professionalism of Clare Lee, whose endeavours as editorial assistant and production co-ordinator were invaluable.

Dr Mark O'Connell
