Retrieval of titles

It was mentioned, in introducing the full list, that each title was coded on its content with regard taxa, geographical area and subject, and that it was possible to produce lists of publications under each heading or any combination of them. Researchers were invited to avail themselves of this facility.

A subject having been selected, the computer can then be programmed to list the name of the author(s) (first 9 characters) and volume and pages. It is then a simple matter to check the original list to obtain the full title. As an example we list below the references concerned with the subject BREEDING BEHAVIOUR:
