Wildfowl Ringing, 1968

Swans
A number of amateur studies of the Mute Swan in Britain involving ringing continued with the help of the Wildfowl Trust. A joint study of the Mute Swan population of The Fleet and Radipole Lake, Dorset, was begun by the Edward Grey Institute, Oxford, and the Wildfowl Trust. Marking of the birds includes the use of large plastic coloured and numbered rings. A further 47 Bewick’s Swans were caught and ringed at Slimbridge bringing the total now marked to over 100.

Geese
The Canada Goose was the only species to be ringed during the year. The Trust continued its support for ringing projects in Shropshire where the local Ornithological Society caught 250 birds, in the west Midlands where Dr. C. D. T. Minton and his team handled 871 birds, and in Yorkshire where Mr. A. F. G. Walker and his helpers rounded-up 425 birds. Associated with this last study was a catch made of 223 moulting Canada Geese on the Beauly Firth, Inverness-shire, organised by the Hon. D. Weir.

Ducks
The Table gives the details of the 8,720 ducks ringed by the Wildfowl Trust, or by people using rings supplied by the Trust, during 1968. The total is somewhat below last year’s record, largely because of a planned decrease in the numbers of Mallard caught at Borough Fen and Slimbridge at certain times of the year when there is little now to be gained from ringing. Features of the Table include the continuing success of Nacton Decoy in catching Pintail and Wigeon, and the useful numbers of Tufted Duck ringed at three stations.

Small but valuable numbers of Mallard and Teal were ringed at Abbotsbury Decoy, Dorset (Mr. F. Lecster), Valley, Anglesey (Mr. R. Palethorpe), and Orielton Decoy, Pembrokeshire (Mr. P. Stuttard). We are grateful to these people for ringing duck for us and for allowing us to make use of the results.

Ducks ringed, 1968.
